"Cosmopoetry is the art which re-creates poetry by using literarily heavenly elements. Astropoetry (astronomical poetry) represents its main and elite part, as a fusion between "the queen of sciences" (astronomy) and "the queen of arts" (poetry), and is characterized by

the measure in which can serve to the popularization of astronomy.

Cosmopoetry can also include:

-Derivations from astropoetry: astro-photo-poetry (astronomical or atmospheric photos and verses

by the same author), astro-art-poetry (astronomical artworks and verses by the same author),

astropoetic dramas (shows on astronomical verses), astrofolk music

(songs on astronomical verses), tourist astropoetry (based especially on trips to astronomical objectives or for observing heavenly phenomena), etc.

-Astrohumanism, a general term for essays on old poetry, mythology and other traditions of the

Cosmos, works about sky lovers' spirituality, astro-humour, etc.

-Complementary sub-genres: Science Fiction and Fantasy cosmopoems with a stronomical features, astronautic poetry, etc.

Moreover, cosmopoetry is a creative alliance of the sky lovers for showing that the people are not only <u>simple inhabitants</u> of a fine planet, but also cosmic beings."

Astropoetry **Stuart** Atkinson, Astropoetry
